

Wall Height vs Max Height of Manure Build up

95mm Horizontal panels up to 6.085m long

TOTAL WALL HEIGHT (m)	MAX. HEIGHT OF MANURE BUILD-UP (M)
1.5	0.75
2.0	1.00
2.5	1.25
3.0	1.50

Design

Although generally considered to be non- loadbearing, 95mm thick panels are ideal for use in livestock buildings. On deep litter systems ie. where the muck is allowed to build up with fresh bedding being provided on top the maximum height of the manure build up should be no more than half the total wall height.
